W. F. SCHMEISKE'S

Hardy Phlox List

KIRKWOOD, N. Y.

MEMORANDUM

We take pleasure in presenting herewith our list of Phlox which I think is as complete as it can well be made.

Some varieties have been eliminated because they have been supplanted by better ones, and those better varieties have been added as only the best are good enough.

SHIPPING CONDITIONS

I WILL SHIP ANYWHERE. PARCEL POST OR EXPRESS. Sender will pay cost of shipment, about 10c per dozen to cover cost.

I try to pack as light as consistent with safe shipping, using waterproof paper for wrapping.

Express charges can be collected on the receiving end.

Foreign Countries have to apply for shipping permits. Inquire at your Post Office for information; this does not apply to seeds.

I do not ship on credit.

Please mention how you want your plants shipped.

For reference as to my responsibility, Dun's or Bradstreet's, First National Bank, or Chenango Valley Savings Bank, Binghamton, N. Y.

Remittance: Send money order, or in small amounts send stamps in 1½ or 2 cents.

Acknowledgment of your order is sent out when received stating about when shipment will be made.

Notice also is sent out when order is shipped and if customers fail to receive their order in a reasonable time they should notify me so that it can be traced.

Claims for damages should be made on receipt of goods.

I aim to send out the best plants obtainable, but in some instances varieties will not grow as large as others, hence, there always will be variation in size of plants, particularly the reds and crimsons are not as strong as the other sorts.

DIRECTIONS AND INSTRUCTIONS

When plants are received from the nursery, unpack them at once. I would say regardless of what condition the roots are in, put them in a pail of water for an hour.

Planting: This should be done in the evening although this is not absolutely necessary for the best well-doing. Plant plants 14 inches in the row and two or three feet between the rows; in bed 18 inches apart; plant them two or three inches deep, spread out the roots so they will do service and give the plant a good start; tramp the roots down hard with your feet, this will not be too much. After the ground is frozen cover it over with a litter of horse manure, leaves or anything else of a similar material and the plants will come through all right and start to growing in the Spring and give abundant flowers during the following Summer. Remove litter in Spring or soon as tops begin to grow.

Culture: If the Summer is dry, water should be supplied as on the lawn or garden in order to keep them growing. In the wet season, mildew is apt to make its appearance and should this occur, dust powdered sulphur on the leaves in the morning when they are wet; then the sulphur will stick. To detect mildew, a white mold will make its appearance on the top of the leaves and draw them together so that they cannot function. Bordeaux mixture is also used for the same purpose.

When a lengthy, dry season sets in, red spiders are apt to make their appearance—they only appear in dry weather. Soap-suds sprayed on the underside of the leaves will curb them; clean water can be used but in that case the force of the water will have to knock them off. If soap-suds are used, it is well to spray with clear water a few hours after, to wash off the suds.

The red spider is a small spider not readily detected with the natural eye but can be detected by a rusty yellow appearing along the ribs and the deeper parts of the leaves, usually on the under side. Keep the soil stirred and plants growing and the above will not bother you.

Before planting Phlox the soil should be enriched with manure the same as you would the garden, as they usually remain in the ground for several years and are strong growers and feeders.

The planting of Phlox should be done from early in September until a very hard frost stops all plant-life. But the order for Phlox should be given as early as possible. Fall is the proper time to transplant Phlox, but the work can be done early in Spring. The plants will be strong and all of such a size that they will give absolute satisfaction the first year as to growth and flowers.

My nursery is inspected every year, hence healthy stock is sent out.

Please send your order as soon as possible, in that way it can be shipped whenever the plants are ready.

This is perhaps the largest Phlox list in this country and I claim to have every thing that is good in Phlox.

Any plant not true to name will be replaced free of charge.

All correspondence will get careful attention.

I have taken down the time the plants are in bloom with us, this is not correct under all conditions, seasons vary, but it can be taken as an average.

The height of Phlox will not hold good under all conditions, they will grow taller when planted too close to shrubbery or other plants.

In closing, I wish to thank my patrons and friends for their patience and co-operation and hope we may work with the same zeal in the future.

Assuring you always to work with the best efforts to do all in my power for your advancement, I am,

Sincerely yours,

W. F. SCHMEISKE.

PHLOX

Paniculata (Decussata)

		In Flower	Price
28	ATHIS. Deep pink, overlaid salmon. Crimson eye	July 29	25c
113	ANTHON MERCE. Grayish lavender, pale pink eye. 1½ to 2 feet.....	Aug. 7	30c
110	ALBION. White, a faint pink center. 2½ feet	July 7	25c
102	ARNOLD TURNER. Fiery crimson scarlet. 2½ feet	July 15	35c
158	ANDREAS HOFFER. An early flowering pure white	July 20	25c
164	A. MICHAUX. Flowers large, very fine; deep, tender rose with carmine eye. 1½ feet	Aug. 7	30c
97	AURORA BOREALIS. Salmon pink, white halo, dark center, petals striped, lively color. 1½ feet	Aug. 7	30c

EARLY PHLOX (Suffruticosa)

	AMOENA. A Creeping Phlox growing close to the ground. It will do well in the shade. Color a bright pink coming early in the spring, about 6 inches above ground		35c
137	MISS LINGARD. White, delicate pink center. Beautiful flower. Good truss. 3 feet	June 20	35c
	MISS VERBOOM. Lavender pink, large truss		40c
98	DR. HORNBY. White overlaid with pink. Crimson center. Good 1½ to 2 feet	June 20	35c
307	ROSE GEM. Pink lavender	July 1	35c
	MACULATA. A native specie with rose purple flowers comes in bloom after Lingard		35c
311	DIVARICATA CANADENSIS. An early flowering native. Species with lavender flowers	June 15	30c
	OVATA. Brilliant cerise red, good showy flower	June 10	35c
	SUBULATA. Can furnish this in mixed light and dark shades of pink. These come very early in the spring conveying an early spring greeting from the Phlox World		35c

These early Phlox ought to have a place in every collection. The clusters are good, large heads, and flower the season through without let-up. The foliage is shiny green, very showy.

We can supply seeds of Phlox in the fall which should be sown as soon as received; it will come up the following spring. \$4.00 per ounce.

NEW PHLOX: MY INTRODUCTION

237	ASA GRAY. Crimson pink, deep crimson eye, a very unusual combination		75c
	DELHI. New, white, dark red lake, large flower and truss		75c
	JUPITER. New, white, with a crimson pink lake		75c
301	OPOLLO. Pure white, tall growing, large truss and flower, late blooming, strong growing		75c
	WILLIAM TELL. Bright pink, with a cerise eye, quite distinct and different from any Phlox		75c
217	GEORGE MENDEL. Rose pink light halo, crimson eye, large flower. 2½ feet	Aug. 1	50c
	MRS. LIVINGSTON FARRAND. Lively flesh pink with cerise eye, a very showy flower. 3 feet	Aug. 5	50c
	MRS. W. G. HARDING. Deep rose pink with a deeper eye. Heavy foliage, large clusters and flowers. The flowers fade as they grow older. It prolongs the season in that the individual flowers do not come all at the same time and often breaks under the old flower head. A very pretty and showy variety. 2½ feet	July 25	50c
	CERISIOUS. Cerise with deeper eye, large flower, a color all of its own. 2 feet	July 25	50c

- 172 White overlaid with pink, lilac center, 2 foot, flower 1½ inches.
